Program Wasserstein Jam (Tuesday 27 October 2026)

Welcome 10 min before		
8h30 – 8h50	Théo Lavier (Université de Toulon)	Application of Semi-Discrete OT for Atmospheric Dynamics
8h50 – 9h10	Alessandro Tedeschi (Scuola Normale)	Sturm's Entropic Measure on Wasserstein Space
9h10 – 9h30	Ernesto Treumún (ENSTA)	Clarke subdifferential over Wasserstein spaces and applications
Pause 30 min		
10h00 – 10h20	Filip Voronine (TU Delft)	A comparison principle for controlled nonconvex Wasserstein gradient flows
10h20 – 10h40	Ivan Romanò (Trento)	State-constrained optimal control of the continuity equations in Wasserstein space
10h40 – 11h00	Alessandro Cosenza (Orsay)	An introduction to branched optimal transport
Pause 30 min		
11h30 – 11h50	Federico Renzi (Scuola Normale)	On the Mosco-convergence of Cheeger energies on varying spaces satisfying curvature dimension conditions
11h50 – 12h10	Fernanda Urrea (INSA Rouen)	Sensitivity analysis for terminal time horizon problems in Wasserstein spaces
12h10 – 12h30	Arthur Schichl (ETH)	Ça arrive
Lunch break		
15h00 – 15h20	Alessandro Pinzi (Bocconi)	The Wasserstein geometry of random measures through superposition principles
15h20 – 15h40	Kexin Lin (Camille Jordan)	Wasserstein gradient flow and JKO scheme for total variation
15h40 – 16h00	Fanch Coudreuse (Camille Jordan)	Ça arrive
Pause 30 min		
16h30 – 16h50	David Lenze (Karlsruhe)	On tangent cones and rigidity of Wasserstein spaces
16h50 – 17h10	Christophe Vauthier (Orsay)	Ça arrive
17h10 – 17h30	Nicolas Lanzetti (Caltech)	From $\mathbb{R}^d$ to $\mathcal{P}(\mathbb{R}^d)$ and back: the variational structure of the Wasserstein space
